How aMG 4-20mA to WiFi Data Logger works

Are you facing these problems?

- · Need to collect data on-the-spot
- · Tedious cabling installation
- · Data not stored in own database server causes data security concerns.

Install the device in areas with WiFi coverage, to read up to 4 channels of 4-20mA data every 1 second, with 7-years in-device backup storage.

IT department develops real-time/historical data analytics, visualization, alerting system using the databases.

Encrypted data is sent to your own database server, securely via WiFi, avoiding cabling chores.
